

Switch Templates

Product Description

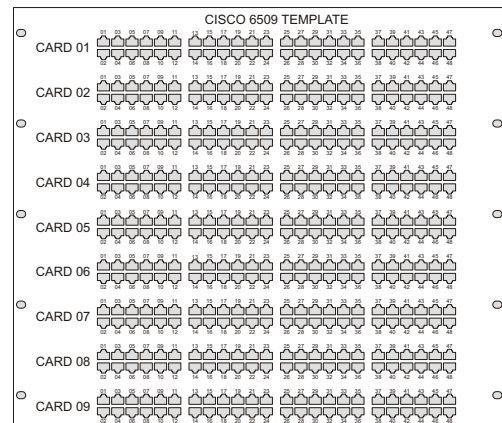

A unique and simple idea, no need to install expensive and sensitive hardware into comms rooms that have yet to be clinically cleaned and/or cabling works are still in progress. Our switch templates replicate the presence of a switch or hub. These have been used on small and large installations and have a proven track record at saving time and money. The range includes Cisco, Nortel, Brocade, to mention a few.

Using our laser technology we cut the 5mm cast acrylic to the exact size of an RJ45 socket (or aperture of your choice). They are then permanently engraved identifying each port.

Once installed in the equipment cabinet you simply plug in all the equipment/flyleads/harnesses into their appropriate ports, dress the cables back to the patching rack/frame and terminate. Once the cables have been tested remove them from the template and leave them ready to be permanently installed into the equipment at the appropriate time.

Alternatively these can be left in place until the equipment is installed (e.g. Day 2 expansion). A company logo can be added at no extra cost.

Technical Data

PRODUCT SPECIFICATIONS

Material: 5mm Cast Acrylic
Marking: Laser Engraved

PERFORMANCE

Weathering: For indoor use

STOCK ITEMS

Cisco, Nortel, HP, AlterPath, Brocade, Extrem, Summit.

Note:

We are continuously updating our templates. If we do not have your specific product on file, we are able to produce a bespoke template from a few simple measurements and dimensions supplied by the manufacturer.
